## *Iris Biotech Laboratories GmbH*

### **Business Strategies**

Iris Biotech Laboratories is a chemical laboratory with specific know-how in synthesizing chiral compounds, hydrophilic polymers and other fine chemicals. The majority of the work is contract research, process development and custom synthesis.

### **Core Technologies and Services**

Iris Biotech Laboratories' employees have long experience and deep knowledge in chemical synthesis of fine chemicals used as intermediates in pharmaceutical research, like complex amino acid derivatives, playing around with all sets of protecting groups, latest generation Click conjugation, components for antibody-drug conjugation, custom synthesis of hydrophilic compounds, like poly(ethylene glycol) derivatives.

Complex synthesis in mg scale up to kg quantities are our daily work. We can develop processes, which can be scaled up to commercial quantities either in your facilities or in ours.
