

Pharma Stulln GmbH

Business Strategies

With Pharma Stulln's newly built plant located in Stulln / Bavaria, we fulfill the international standards for modern production of sterile pharmaceutical products. We possess over 25 years of experience in the manufacture of preservative-free eye drops in single dose units. We offer this modern and convenient form of application for nearly all indications.

Core Technologies and Services

The bottelpack® procedure ensures highquality, sterile filling of pharmaceutical and medicinal preparations. Regarding production, Pharma Stulln places special emphasis on vials and especially single-dose containers. These types of packaging are the method of choice preferred by manufacturers, doctors, and consumers. The name Pharma Stulln stands for years of expertise in Blow-Fill-Seal-production (BFS) with bottelpack® machines. In contract manufacturing, it benefits for customers in the medical and pharmaceutical branches to make use of this expertise. For more than 25 years, we have been producing our own ophthalmological products using the BFS process. We take charge of the entire contract manufacturing for customers all over the world, from galenical development to the finished product. Whatever your needs may be. Sterile or non-sterile. Fluids or gels. With BFS, you have lots of options. Our production focus:

- eye, ear and nose drops
- respiratory solutions
- lenscare products
- viscous solutions
