DRACOON GmbH

Business Strategies

Every company has the challenge of safely storing data digitally, administration and sharing of data. DRACOON from Regensburg is a market leader in the field of Enterprise Filesharing in the German-speaking realm and gives the world back its sovereignty over its data.

Core Technologies and Services

The Filesharing Solution Enterprise DRACOON is a modern and multiply certified cloud storage entity, which fully supports DSGVO conforms in all the daily challenges of internal and external collaboration. In keeping with the principle "privacy by design" the software provides an integrated encoding system controlled by the client so that not even the admin or the operator have access to the data. The finely granulated user and rights management offers individual access rights to all stored data. This means the authorized users have complete control over the data. DRACOON is intuitive to use and is suitable for all employees as a central data platform. Thanks to the universal API used, DRACOON serves as a central data backend and can be simply attached to further programs. This prevents multiple storage of data and guarantees maximally secure communication of systems between each other. In this way sensitive data has maximal protection at all times.

Patents, Licenses and Cooperations

DRACOON has been designated by top analysts such as ISG as a "leader". Various certifications such as ISO 27001, EuroPriSe and ULD verify DRACOON's highest security standards.
