

LI-EX GmbH

Business Strategies

To produce lighting systems that are sustainable for people and the environment and CO2-neutral – this is part of the LI-EX GmbH philosophy. So that people can live and work in healthy and natural light, to create a virus free environment using UV-C light and to transform agriculture into vertical farming of the future.

Core technologies and Services

LI-EX GmbH has developed a room air purifier which with the aid of UV-C light kills of 99.9% of microorganisms. With the most effective wavelength 253.7nm viruses, bacteria, yeasts and molds hanging in the air are killed off without any ozone harmful to the environment and our health being produced. The air purifier can be used with people present in the room without any concern, as no UV-C light is released from the sealed unit. Not only the room air purifier but also a nose-mouth protection mask and a conveyor belt bacteria removal system are amongst other products part of the UV-C product palette at LI-EX GmbH. Developed and produced directly at the Regensburg location – Made In Germany.
