

B-Horizon GmbH

Business Strategies

We at B-Horizon strive to become the leading partner for customer-oriented sensor and microelectronics development. To achieve this, we are continuously building our expertise, expanding our team and creating new high-tech jobs at one of the most attractive locations in Germany.

Core Technologies and Services

At B-Horizon, we support companies in the realization of innovative semiconductor components through implementation of state-of-the-art development and management processes in microelectronics. Besides defining system solution approaches, we also specialize in developing customer-specific semiconductor components while monitoring the development and production processes all the way to the series production.

Recognized for our self-developed smart sensor system B-Neo, we have received several innovation awards. B-Neo can measure multiple parameters simultaneously. The application fields are diverse: The sensor system can collect data in car seats, sportswear, or mattresses, process it using AI and enable new functions, providing added values to our customers.
