

Seamless Bio

Business Strategies

Distribution of biological materials from animals and humans, as well as plastic goods (single-use equipment and also for example special applications such as IVF) for the academy, biotech / pharmaceutical industry.

Core Technologies and Services

Seamless Bio solves problems of sourcing, manufacturing, and developing biological products for the life sciences sector. We provides a wide range of biological materials, including animal and human products, customized products as antibodies, growth factors and plastics like Single-Use-Bags and well plates. These products cater to various applications such as cell culture, diagnostics, biopharmaceuticals, and scientific research.
