Davids Biotechnologie GmbH

Business Strategy

Davids Biotechnologie, based in Regensburg, is a specialist in the development and preparation of antibodies and therefore makes an important contribution to the security of supply of diagnostic and research reagents in Europe. Our own research activities continually optimize the methods used in order to provide our customers with the highest quality. A flat hierarchy with many opportunities for our employees to have a say ensures quick, successful and market-oriented decisions. Davids Biotechnologie is a training company with graduates who are regularly among the best in their class.

Technologies and Services

- Expertise in the development of polyclonal, monoclonal and recombinant antibodies as well as secondary antibodies
- Chromatographic methods from the analytical to the preparative scale in the field of biomolecules, in particular antibodies
- Conjugation of enzymes and fluorescent dyes to antibodies and other biomolecules
- Cell culture assays to determine the activity, toxicity and efficacy of drugs, toxins and other substances in 2D, 3D and 4D cell cultures
- Purification and processing of antibodies
- Development of immunoassays and cell culture assays
- Peptide synthesis and their preparation for use as antigens or in cell culture
- RNA isolation from immune cells to obtain recombinant antibodies

Patents, Licences and Collaborations

Our company's own methods form the foundation of our success. The use of environmentally friendly raw materials in combination with energy-saving work processes enable fair, competitive prices with maximum quality. We see our clients as partners to whom we provide optimal services with our knowledge and methods.

Distribution

Our services are marketed directly to our clients worldwide.
