

## ***Delta Entwicklungsgesellschaft GmbH***

### **Business Strategies**

Since its foundation in 1994, DELTA Entwicklungsgesellschaft mbH works in development projects on a contracting basis for national and international clients. Primarily, we work for the automobile industry, the medical industry and mechanical engineering.

### **Core Technologies and Services**

In the early stages of our process chain we usually work on a market- and competition study. Of course there is also the possibility to make a feasibility study. On the basis of calculation and simulation we make concepts, drafts and computer- aided designs. Our production drawings are the base of our prototype building and testing.

Our electronic technicians develop and produce the matching electronic control system for the application.

Among our developments are as well different hydraulic and electromechanic surgery and therapy tables as a robot system for minimally invasive surgery.

### **Patent, Licenses, Co-operations**

Since 1998, we are involved in the area of minimally invasive surgery. We have founded the project "Universal platform for surgical interventions". DELTA Entwicklungsgesellschaft mbH holds several international patents and trademarks.

### **Distribution**

Global marketing of medical devices is performed by Aktormed GmbH SOLOSURGERY.
